

Biosolids removal. Simplified.

Now that the wastewater is sparkling clean, what do you do with what's left behind?

The AGL Energy Services Organic Energy Division offers turnkey solutions that can reduce your municipality's carbon footprint while saving on transportation and other disposal costs. Using a patent pending technology, our end product is Class A, meaning it can be reused without risk to people or the environment.

Traditionally, biosolids disposal involves trucking it to rural areas, incineration or dumping into landfills. However, concerns about contaminants, runoff, air pollution, tipping fees and transportation costs have resulted in cities and municipalities looking for better, more efficient ways to handle the removal of bio-waste.

What's green about biosolids?

AGL Energy Services helps clients manage their energy, conservation and bio-waste disposal needs through solutions that are environmentally friendly and that positively impact your bottom line.

Environmental benefits

- We use natural gas, landfill gas or waste heat to dry the biosolids at temperatures that destroy pathogens and vector.
- Particulates from the process are captured and disposed of properly.
- Beneficial reuses are found for the dried material, which is reduced by 80 percent of its initial weight.
- We can establish a biosolids-drying facility at a location that allows for the efficient use of your resources – eliminating or minimizing the need for transportation.
- No more expensive trips to haul heavy biosolids hundreds of miles.
- No more straining overburdened landfills.

Additionally, with innovative, environmentally-oriented thinking, you'll have an excellent story to tell to your community.

How can AGL Energy Services Organic Energy Division help you?

We develop innovative, proprietary and cost effective ways for our clients to remove biosolids from their water treatment facilities.

We focus on:

Turnkey solutions: Once we take the biosolids, your job is done. We dry the biosolids and dispose of it, with no further involvement required from your municipality.

On-site presence: We're experienced at developing on-site facilities at waste treatment plants, eliminating the need to haul waste to another location. For municipalities with multiple treatment facilities, we can create a process that minimizes transportation requirements.

A simplified process: For many municipalities, removing biosolids is a cross-jurisdictional endeavor involving many departments and/or numerous vendors. Factor in the costs of labor, fuel, fees, etc. across multiple departments, and it can be difficult to have insight into the total cost of removal. Whether you have one wastewater treatment plant or multiple facilities, we can handle everything, so you know your resources are being used efficiently.

Reduced risk: Transporting Class B biosolids and spreading it on open land risks the possibility of human exposure to heavy metals, pharmaceutical products and other contaminants. We eliminate the risk by drying the biosolids to Class A quality [standards] and disposing of it in an environmentally friendly manner.

Expansion: We have the ability to handle everything from small to major cities and everything in-between. Some municipalities find it beneficial to partner with another to aggregate their biosolids disposal needs.

Dependability: We are part of AGL Resources (NYSE: GAS), an Atlanta-based energy services company. Our corporate backing allows us to provide stability and service that smaller operations can't offer. You can rely on us to do what we say we will do, when we say we will do it.

AGL Energy Services has a biosolids removal solution
that's clean, green and cost-effective.

About AGL Energy Services

AGL Energy Services teams with government agencies, the military, schools, hospitals, and large commercial and industrial clients throughout the United States to help save energy and money by providing energy-management and conservation programs that pay for themselves over time. Our organic energy solution is one more way we are helping our clients find environmentally friendly solutions.

AGL Energy Services is owned by AGL Resources (NYSE: AGL), an Atlanta-based energy services company that has been synonymous with superlative customer service and cost-effective energy solutions for more than 150 years. AGL Resources utilities serve approximately 2.3 million customers in six states. The company also operates retail energy operations, wholesale services and energy investments, making it one of the nation's preeminent distributors of natural gas.
